

Type D2

This clamp has an adjustable Setscrew Tail that can be adapted to fit a range of flange thicknesses.

- Suitable for parallel and tapered flanges up to 5°.
- Recessed top holds the bolt head captive while the nut is tightened. Type W washer (page 20) can be used to fill the recess.
- The skirt prevents the clamp from rotating during installation.

- Packings are available to increase the clamping range, see page 20.
- Location plate / end plate details can be found on page 21.

Material: Malleable iron, zinc plated / hot dip galvanised.

Location and End Plates for Types LR and D2

These plates ensure the clamps and bolts are located in the correct position relative to the supporting steelwork. If you would like help with choosing a suitable plate, please contact Lindapter.

Location Plate

What is it?

Location plates are simple fabricated items designed to sit between the two sections to be clamped together to ensure the bolts are fixed at the correct centres.

Material: Structural steel grade S355 JR or JO.
For other grades contact Lindapter.

End Plate

What is it?

End plates are simple fabricated items that are pre-welded to support frames, bracket or sections, allowing connection to the supporting structure with standard Lindapter clamps.

Material: Structural steel grade S355 JR or JO.
For other grades contact Lindapter.

1) Depending on the type of connection and associated end plate use, the thickness may need to be modified to comply with accepted local design codes.

- To calculate the bolt length, add up the total distance that the bolt will pass through, plus half of the bolt diameter. Then round up the total to the nearest available bolt length. An example can be found on page 6.
